Runways	2,400,000
Taxiways	649,998
Building Sq Footage	722,317

INSTALLATION INFORMATION:

- U.S. NAS JRB Fort Worth, Texas was officially established on October 1, 1994, as the first-ever joint service reserve base. The 2,300-acre base is the result of the DoD's 1993 BRAC recommendation to relocate Naval Air Station Dallas and its tenant commands to the former Carswell Air Force Base. Additional tenant commands from other closing installations were also directed to relocate to the base, such as U.S. Marine Corps Reserve squadrons from Memphis, Tenn., and Glenview, Ill., in July/August 1994. The 1993 BRAC proceedings also placed the Navy as the host of what has become a new joint military reserve base - a model for future consolidations.
- **Major NEPA Actions:** The 301 FW has completed the Environmental Impact Statement (EIS), public hearing, and Site Activation Task Force (SATAF) IV for the potential beddown of F-35A aircraft at U.S. NAS JRB Fort Worth, Texas. The Air Force has proposed to locate a squadron of F-35A aircraft at one of four AF Reserve units in geographically dispersed locations: Florida, Missouri, Texas and Arizona. The wing was identified as the preferred location in January 2017. The wing awaits the Secretary of the Air Force (SECAF) Barbara Barrett's, record of decision (ROD) in late September 2020. If selected, the wing will become the first F-35A unit in AFRC.
