Installation Info

U.S. NAS JRB Fort Worth, Texas was officially established on October 1, 1994, as the first-ever joint service reserve base. The 2,300-acre base is the result of the DoD's 1993 BRAC recommendation to relocate Naval Air Station Dallas and its tenant commands to the former Carswell Air Force Base. Additional tenant commands from other closing installations were also directed to relocate to the base, such as U.S. Marine Corps Reserve squadrons from Memphis, Tenn., and Glenview, Ill., in July/ August 1994. The 1993 BRAC proceedings also placed the Navy as the host of what has become a new joint military reserve base - a model for future consolidations.

Selection of AFRC's F-35A

On January 8, 2021, (then) Secretary of the Air Force (SECAF) Barbara Barrett announced her record of decision (ROD) selecting the 301st Fighter Wing to become the first F-35A (5th generation aircraft) owned and operated unit in Air Force Reserve Command. The wing is expected to receive its first F-35A aircraft in Summer 2024, replacing the current compliment of F-16C Fighting Falcons.
